

a guide to the validation of
planning applications

Adopted July ~~2015~~2017

Contents

1. Using this guide
2. About validation
3. National requirements
4. Local requirements

1. Using this guide

This guide has been produced to help applicants for planning permission and other similar consents to submit applications that are complete and contain all relevant information.

Planning decisions can be delayed when applications are submitted without sufficient information to enable proposals to be assessed properly. Problems of this sort sometimes arise because applicants are uncertain about what type and level of information is needed. This guidance is intended to provide greater clarity for applicants about application requirements, and, in turn, enable the Council to make quicker decisions.

The guidance offered here focuses on the basic requirements for essential information. However, advice is also provided about additional supporting information that, although not essential, may also help to speed up consideration of applications and make a positive result more likely. By providing an appropriate level of information from the outset, applicants can ensure that their proposals are not rejected simply because of a lack of supporting evidence and justification.

Every attempt has been made to cover the most common types of planning application and the supporting information and documentation usually required. However, given the wide variety of applications made, it is inevitable that additional information not specified here will sometimes be required. When this situation arises, applicants will be advised as early as possible during the consideration of the application. Pre-application discussions with the Council are encouraged to help identify specific requirements, particularly for larger or more complex proposals.

Following this introduction, the guide is split into three parts. Section 2 provides a brief outline of the validation process, Section 3 sets out the mandatory national requirements for applications and Section 4 deals with the Council's local requirements.

This guidance replaces the Council's 'Guidance on the Validation of Planning Applications' published in July ~~2013~~[2015](#).

2. About validation

Validation is the process undertaken by the Council to check that new planning applications are complete and include all relevant supporting information. Validation is concerned only with whether applications have been correctly made. It is not concerned with whether proposals are acceptable in planning terms.

Information Requirements

The information and documents required to make a valid planning application comprise:

- a completed application form;
- the mandatory national information; and
- information specified by the Council in its Local List.

The amount and type of information required with planning applications will vary from case to case. Information will only be requested by the Council if it is necessary and relevant to the application concerned.

The Validation Process

Following receipt of an application, the Council will decide whether it is valid. This process normally takes up to 3 days, although longer may be needed for large or complex application (up to 5 days).

If an application is valid, a written acknowledgement will be provided, together with confirmation of the statutory determination period for the application. The process of deciding applications begins as soon as possible after applications have been validated. The statutory determination period will run from the day after a valid application was received (even if validation is completed after this date).

If applications are found to be invalid, applicants/agents will be advised of the reasons for this and asked to provide additional information to enable the application to proceed. If an applicant disagrees that additional information is necessary, written confirmation of this should be given to the Council, together with the reasons. In response, the Council will issue one of two notices:

- a 'validation notice' confirming the requested information is no longer needed; or
- a 'non-validation notice' maintaining the requirement for more information.

If a non-validated application is not decided within the statutory time limit (normally 8 or 13 weeks), then the Applicants may lodge an appeal on grounds of non-determination once the statutory time limit has expired on a non-validated application.

3. National mandatory requirements

The Town and Country Planning (Development Management Procedure) (England) Order 2015 sets out a number of mandatory national requirements for planning applications, including application forms, fees, ownership certificates and location/site layout plans. Further information about these national requirements is set out below.

Completed Standard Application Form

Applications should be made using the national Standard Application Forms (1APP forms).

1APP forms are available for the following types of planning application and related consents: full planning permission, outline planning permission, approval of reserved matters, householder permissions, listed building consent, conservation area consent, variation of planning conditions, discharge of planning conditions, extension to time limits, non-material minor amendments, lawful development certificates, advertisement consent, applications for prior approval under the General Permitted Development Order, Tree Preservation Order consents and notification of tree works in conservation areas.

Application types not covered by 1APP include applications for prior approval under the General Permitted Development Order, Hazardous Substances Consents and variations/discharge of section 106 agreements. Forms are available from the Council for these types of application.

Applications made with 1APP forms may be submitted electronically via the Planning Portal or in paper form directly to the Council. Applications submitted electronically do not need to be accompanied by any paper copies of the application form or supporting documentation. In some cases it may not be possible to submit all supporting information online (due to the size of documents), in which case documents may be submitted in paper form or electronically on a CD. Applications submitted in paper form must include ~~four~~ two copies of the application form and of all supporting information, unless otherwise agreed (for large reports, one paper copy and an electronic copy on CD will often suffice).

Application Fee

Most applications for planning permission require a fee which must be paid when an application is submitted. However, some applications, such as listed building consent applications, are exempt. A fee calculator is available on the Planning Portal. A leaflet detailing current fees is also available from the Council. Advice on particular applications can be provided on request.

Ownership/Agricultural Certificate

All applications for planning permission, listed building and conservation area consent must be accompanied by a certificate of ownership. For this purpose an 'owner' is anyone with a freehold interest in a site, or leasehold interest with an unexpired term of not less than 7 years.

The following certificates must be completed depending on the circumstances:

- Certificate A – if the applicant owns the application site;
- Certificate B – if part of the site is owned by someone other than the applicant;
- Certificate C - if part of the site is owned by persons unknown;
- Certificate D - if all of the site is owned by persons unknown.

Notice must be served on any owners of the site (other than the applicant) in accordance with the Development Management Procedure Order.

Applicants must certify either that there are no agricultural tenants on the site, or that, if there are, that they have been notified of the application. This certificate is not required if the applicant is making an application for reserved matters, renewal of temporary planning permission, discharge or variation of conditions, tree preservation orders, or express consent to display an advertisement.

Location Plan

All applications must include a location plan based on an up-to-date map. This plan should be at a standard metric scale (usually 1:1250 or 1:2500). Plans should show sufficient adjacent roads and surrounding buildings so that the exact location of the application site is clear. The application site should be edged clearly with a red line. The red line area should comprise all land necessary to carry out the proposed development, including land required for access to the site from a public highway, visibility splays, landscaping, car parking and open areas around buildings. A blue line should be drawn around any other land owned by the applicant, which is close to or adjoins the application site. The plan should also detail the direction of North.

Site Layout Plan

Applications should include a site layout plan at a standard metric scale (typically between 1:100 and 1:500).

Site layout plans should always show accurately:

- the proposed layout of the development in relation to the site boundaries and other existing buildings on the site; and
- the direction of North.

In addition, where relevant to the consideration of the application, the following details should be shown:

- all buildings, roads and paths adjacent to the site;
- all rights of way crossing or adjacent to the site and any rights of way potentially affected by the development;
- the position of all trees on or adjacent to the site;

Formatted: Indent: Left: 0.84 cm, Hanging: 0.63 cm

Formatted: Font: 10 pt

- existing or proposed boundary treatments, including walls and fences; and
- existing or proposed hard surfacing.

Copies of Plans

Two copies of the following plans and drawings should be submitted with applications, unless they are made online via the Planning Portal when one electronic copy is needed. For applications where the forms are submitted electronically, but plans are submitted in paper form, two copies of all plans and drawings should be submitted.

Design and Access Statements

Planning applications for the following types of proposal must be accompanied by a Design & Access Statement:

- Major developments*;
- One or more dwellings in a Conservation Area or World Heritage Site;
- Buildings with a floorspace of 100 square metres or more in a Conservation Area or World Heritage Site;
- Listed Building Consent applications.

Design and Access Statements are not required in connection with the following types of development:

- A change of use of land or buildings (unless it also involves external building works);
- Engineering or mining operations; or
- Applications to remove or vary planning conditions.

A Design and Access Statement is a written statement that explains:

- the design principles and concepts that have been applied to a development proposal;
- how the context of the development has been considered;
- the policy adopted for access;
- what consultation, if any, has been undertaken in relation to access issues; and
- how any specific issues on access have been addressed.

Further details are set out in National Planning Policy Guidance (NPPG).

Design and Access Statements are required with all applications for listed building consent. Such statements should explain how design principles and concepts have been applied to take account of:

- the special architectural or historic importance of the building;
- the features of the building that justify its designation as a listed building; and
- the building's setting.

Statements should also explain how matters of access have been dealt with.

* Major developments include proposals for 10 or more dwellings, buildings with a floorspace of 1,000 square metres, and development on site of 1 hectare or more.

Outline Planning Applications

Applications made for planning applications may be submitted in outline, leaving certain details (called 'reserved matters') to be decided later. The matters that may be reserved are appearance, layout, scale, access and landscaping. Outline applications may reserve some or all of these

Formatted: Indent: Left: 0.21 cm

Formatted: Bulleted + Level: 1 +
Aligned at: 0.84 cm + Indent at: 1.48 cm

matters for later consideration.

Where access is a reserved matter, outline applications must still provide indicative or illustrative details of the intended access arrangements. However, where appearance, landscaping, layout and scale are reserved, no further information needs to be submitted in respect of these matters. Once an application has been registered as valid, the Council may still decide that the application ought not to be considered separately from some or all of the reserved matters. In such cases, a formal notice will be issued to the applicant within one month of the date of registration.

4. Local requirements

In addition to the mandatory national requirements, applications must include information specified in the Council's Local List where it is relevant to the development proposed.

The following constitutes the Council's Local List for the purpose of the Town and Country Planning (Development Management Procedure) (England) Order 2015.

As well as setting out the requirements for essential information, the Local List identifies a number of areas where additional supporting is desirable, although not essential. Applications submitted without relevant desirable information will be validated, but may take longer to decide due to the need to seek further information or could be refused due to a lack of proper justification.

Architectural plans, Drawings and Photographs

In addition to the national mandatory requirement to provide a location plan and a site layout plan, further plans and drawings may be required depending on the type of application and the nature of the development proposed.

Elevations

Where new buildings are proposed, drawings will be required of all proposed elevations at a standard metric scale (usually 1:50 or 1:100). All sides of the proposed development must be shown (including internal 'courtyard' elevations), and these should indicate, where possible, the proposed building materials and the style, materials and finish of windows and doors. Blank elevations must also be included; if only to show that this is in fact the case.

Where an extension or alteration to an existing building is proposed, elevations should show clearly how the proposed extensions or alterations relate to the existing building. The amount of the existing building that needs to be shown will depend on the nature of the proposal and its likely impact.

Where a proposed elevation adjoins another building or is in close proximity, the drawings should clearly show the relationship between the buildings, detail the positions of windows and doors on each property and

include the location of site boundaries. Where demolition is proposed, the extent of the structure(s) to be removed should be clearly shown and distinguished from the building(s) being retained.

Elevations will not be required for the change of use of land or buildings where no external alterations to buildings are proposed.

Floor plans – existing and proposed

In some cases the internal layout of a building will be a relevant consideration, perhaps to show how different parts of a building will be used, or to allow the effects on neighbouring properties to be assessed. Where this is the case, applications should include drawings of existing and proposed floor plans (normally at a scale of 1:50 or 1:100) and include the location of site boundaries where relevant. Where existing buildings or walls are to be demolished these should be clearly shown. The drawings submitted should show details of any existing building(s), as well as proposed new buildings.

Roof plans

Where new roof structures are proposed, or where alterations are proposed to existing roofs, applications should include drawings to show the shape of existing and proposed roof structures (usually at a scale between 1:100 and 1:500).

Site levels

Where a proposal includes noticeable changes in ground levels, drawings should be submitted to show both existing and finished levels. On sloping sites, details should be provided of any alterations to levels, the level of buildings in relation surrounding ground levels and the level of new buildings relative to existing buildings. Information on levels may be presented in the form of spot ground levels, finished floor levels and cross sections.

Street elevations

Street elevations are helpful where a development's visual relationship with adjacent buildings is an important street scene consideration. This is more likely to be the case where infilling is proposed in closely built up areas, in conservation areas and close to listed buildings. Street elevations should accurately show proposed and existing buildings, taking into account any changes in ground levels, and should show at least the nearest properties on either side of the site. It is helpful for applications proposing front fences/walls to include drawings that show the height, location and material finish of front fences/walls at adjacent properties.

Photographs and visualisations

Photographs, photomontages and visualisations can provide useful background information in support of development proposals. Photographs can be used to show:

- Existing features that will be retained as part of a proposal;
- How new development will integrate with its surroundings;
- The visual impact of development on the surrounding area.

Photographs and visualisations are not acceptable as a substitute for plans and drawings as they cannot be accurately scaled.

Amendments to Approved Plans

Amendment applications must be accompanied by the already approved plans/elevations and include a separate set of proposed plans/elevations. In addition to the amendments being described in the application form, the proposed plans/elevations must clearly show the extent of the amendments being sought and distinguish them from what was previously approved. This can take the form of a written description on the plan

(such as a schedule table), or annotating those areas of the plans/elevations that are to be varied. Annotations may take the form of a circle, cloud/bubble, small number or the like. For example, if an additional window is proposed on a side elevation then the window could be shown in a circle, cloud/bubble or be numbered. This information is required so that Council and neighbours (for those amendments that are publicly notified) can readily identify the changes proposed in the amendment application. Amended plans must be titled and dated as being amended (e.g. Revision A).

Advertisement Consent Drawings

Plans submitted with applications for advertisement consent should show the advertisement size, siting, materials and colours to be used, height above ground, extent of projection (if attached to a wall/façade) and details of the method and colour(s) of illumination. Plans should be at a scale of 1:50 or 1:100 and include written dimensions and a scale bar.

Planning Policy Statement

It can be helpful for planning applications to include a Planning Policy Statement in the following situations:

- where a proposal conflicts with planning policy and a special justification is put forward; and/or
- where complex issues relating to the interpretation of policy are raised.

Planning Policy Statements should be concise and should not recite in full all relevant planning policies. Planning Policy Statements should explain

how a proposal complies with policy, and, in cases where there is a conflict with policy, why an exception to policy is considered to be justified.

Sustainable Development Statement

Dwellings (other than agricultural dwellings) proposed outside of defined settlement boundaries conflict with local policy. The NPPF states that housing applications should be considered in the context of a presumption in favour of sustainable development where an authority does not have an up to date five year housing supply. ~~(at present the Brockland district is below this figure)~~—It is therefore helpful in the consideration of applications for dwellings located outside of defined settlement boundaries to be supported with information demonstrating how the proposal constitutes sustainable development. Information may take the form of identifying on a scaled location plan, or by written description, the locations of the following:

- The nearest defined settlement boundary;
- The main body of the nearest settlement (if the nearest settlement does not have a defined settlement boundary);
- The nearest local amenities, e.g. shops, schools, community facilities, public parks etc;
- Location of surrounding built form (irrespective of the nature of their use);
- Any public transport routes;
- Any footpath network and street lighting.

Town Centre Uses

Certain commercial developments are defined as 'main town centre uses' in national planning policy. These uses include retail developments,

leisure/indoor sports schemes, offices, hotels, conference facilities and the like. Applications for such retail, office and leisure developments outside town centres, which are not in accordance with local policy, should include a report to show that a sequential approach has been taken to site selection. For proposals with a floorspace of more than 2,500 square metres, an Impact Assessment should be provided detailing likely effects on the viability and vitality of existing centres and on any planned investment.

Marketing Justification

Core Policy DC 6 seeks to protect existing employment sites within designated General Employment Areas from changes of use to non-employment uses such as retail or leisure. Non-employment uses can undermine town centre vitality and pose a threat to employment enterprises. Applications proposing the loss of employment floorspace in a General Employment Area will therefore usually need to demonstrate, by marketing evidence, that there is no reasonable or realistic current demand for employment floorspace on the site.

The marketing evidence should set out clearly the means and period of marketing (usually 12 months), include the Commercial Property Agent details and a summary of the following marketing responses:

- Number/type of enquiries received;
- Number of viewings;
- Number, type/proposed uses and value of offers;
- Reasons for refusal of an offer.

Planning Obligations

Where a Section 106 agreement will be required in connection with a proposed development, planning applications should include Draft Heads of Terms, setting out in general terms what obligations are proposed. Planning obligations are typically required to secure the provision of affordable housing, public open space, recreation payments and contributions towards local education, library and transport services and healthcare.

In order to avoid delays in the determination of applications, the Council will normally instruct its solicitors to start work on the drafting of Section 106 agreements at an early stage in the consideration of the applications. To enable this to happen it will be necessary for the applicant to provide:

Proof of the owner's title (including title plan). All the owners of the site will need to enter into the agreement. If the land is registered this will be by recent office copy entries (no more than 21 days old). If it is unregistered, an epitome of title should be provided;

Names and addresses of any chargees, lessees, mortgages or other holders of security on the land, as all parties with an interest in the land would need to sign the agreement;

A written agreement to pay the Council's reasonable legal costs in connection with the negotiation, preparation and monitoring of the legal agreement;

Contact details of the solicitor acting on behalf of the applicant.

Financial Viability Assessments

A Financial Viability Assessment (FVA) will usually be required for any development that generates a need for developer contributions where the applicant is of the view that the economics of the development cannot

support the likely requirements for contributions made by the Council or other stakeholders.

The Council will seek to enter into legal agreements under Section 106 regarding developments which trigger the threshold for planning obligations and affordable housing. When applicants are not able to offer the full extent of such obligations, this should be justified by a Financial Viability Assessment. This requirement applies where less or no affordable housing than is required by local policy is included in a residential development of 11 or more dwellings or with combined floorspace of more than 1,000sqm (includes outbuildings such as garages).

The Viability Assessment should set out in detail the costs of carrying out the development and the anticipated return on that investment. The purpose of the Assessment is to provide a clear understanding of the economics of the development on a particular site, and will be used to assess whether or not a development is able to meet the full requirements for planning obligations normally required.

The Viability Assessment should be in the form of a fully detailed land appraisal including reference to the scheme revenue and sales values. Details should also include the full costs of carrying out the development including for example land cost, construction costs, fees and the costs of the various contributions thought likely to be required (e.g. for community infrastructure, off site highway works etc).

Where applicants wish FVAs to be treated as commercially confidential by the Council, a redacted version of the FVA without sensitive information should be provided to enable full and transparent consultation with other interested parties.

Consultation Statements

It is helpful for planning applications to include a Consultation Statement where extensive pre-application consultation has been undertaken, particularly for large scale developments. Such statements should explain how the views of the local community and interested parties have been sought and how they have been taken into account in the development proposals. Where a less extensive consultation exercise has been undertaken, responses may be detailed in a Design & Access Statement (if required). Further advice on pre-application consultation is set out in the Council's adopted Statement of Community Involvement.

Consultation Duty - Wind Turbines

In accordance with Section 3(1) of Part 2 of the Town and Country Planning (Development Management Procedure) (England) Order 2015, pre-application consultation must be carried out for any application proposing the harnessing of wind power for energy production where—

the development involves the installation of more than 2 turbines; or

the hub height of any turbine exceeds 15 metres.

Pre-application consultation must include bringing the proposed application to the attention of a majority of the persons who live at, or otherwise occupy, premises in the vicinity of the land that is subject of the wind power application.

Energy Statements

It is helpful for planning applications for large scale major developments to include an Energy Statement. Policy DC14 of the Council's Core Strategy requires major development proposals to find 10 per cent of their energy

requirements from renewable sources. Energy statements should outline the overall energy strategy proposed to meet this objective. For most other developments, a short outline of energy proposals incorporated into Design & Access Statements will suffice.

Crime Impact Statements

It is helpful for planning applications to include a Crime Impact Statement for the following developments:

- Housing developments of 10 or more dwellings;
- Commercial developments of more than 1,000 square metres;
- New neighbourhood community facilities;
- New shop fronts;
- New cash machines;
- New restaurants, hot food takeaways, pubs and night clubs.

Crime Impact Statements should include information on crime and disorder issues in the vicinity of the site, assess the likely impact of the proposal, and, where relevant, suggest measures to reduce the vulnerability of the development to crime. Crime Impact Statements are generally best incorporated into a Design & Access Statement (if required), or else provided as a short written report.

Environmental Statements

The Town and Country Planning (Environmental Impact Assessment) Regulations [2011 and 2017](#) set out the circumstances in which an Environmental Statement is required with a planning application.

Applications submitted without an Environmental Statement, will be screened by the Council after validation to determine whether EIA development is proposed. Where an Environmental Statement is required applicants will be notified within 21 days of receipt, unless a longer period is agreed.

Before submitting a planning application, potential applicants may request a formal 'Screening Opinion' from the Council to determine whether a proposal is EIA development. Guidance may also be sought on what should be included in an Environmental Statement by submitting a 'Scoping Opinion' request.

Wildlife Impact Statements

Where development proposed is likely to affect wildlife or biodiversity interests, additional supporting information will be required. This information may include Protected Species Surveys, Ecological reports, plans/drawings showing wildlife features and proposals for the mitigation of the impact of the development.

Ecological reports should be submitted with planning applications for developments which will affect the following areas:

A designated site (such as a Special Protection Area [and within the 1.5km constraint zone for Breckland Special Protection Area \(SPA\)](#), Special Area of Conservation, Ramsar Site, Site of Special Scientific Interest or County Wildlife Site);

A priority habitat (including ancient woodland/hedgerows, floodplain grazing marsh land, fens, marshes, wet woodlands, reed beds, etc);

Other biodiversity features (secondary woodland, mature/veteran trees, underground structures, large derelict brownfield sites, urban green spaces such as parks);

Other geological conservation features (mineral workings, rivers, streams, underground mines/tunnels).

This information will usually be required unless it is clear that designated sites or biodiversity or geological features will not be affected by the proposed development. Evidence of this will be required in the form of a letter or short report from a suitably qualified person.

Protected Species Surveys should be submitted with planning applications for the following types of development:

- the conversion of traditional farm buildings;
- the redevelopment of derelict brownfield sites of more than 0.5 hectare;
- development on land which includes or is adjacent to ponds, rivers, streams or former mineral workings;
- any development where it is known or suspected that protected species are present on the site or adjacent land.

This information will usually be required unless it is clear that protected species are not present or will not be affected by the proposed development. Evidence of this will be required in the form of a letter or short report from a suitably qualified person.

Tree Surveys/Arboriculture Information

In all cases where there are trees within a development site, the trees should be plotted accurately on site survey and/or site layout plans. Plans should be annotated to show tree species, height and crown spread.

In addition, where there are 'important trees' within the application site, or on land adjacent to it, that could be affected by the development,

additional information will be required. The additional information will include the following:

- a tree survey;
- a tree constraints plan;
- an arboricultural implications assessment;
- an arboricultural method statement (if relevant);
- a tree protection plan (if relevant).

This information should be prepared by a qualified arboriculturist in accordance with the guidance set out in BS 5837: Trees in Relation to Construction, and should identify which trees are to be retained and explain how these trees will be protected during construction works. Use of the methodology set out in BS 5837 should help to ensure that development is suitably integrated with trees and that potential conflicts are avoided.

It is the responsibility of applicants to ensure that sufficient information is provided to enable the impact of the development on trees to be assessed properly. However, in order to assist the process of deciding whether 'important trees' will be affected by a proposed development (and will therefore trigger the requirement for additional information), the following guidelines should be followed

'Important trees' include:

- trees covered by a tree preservation order;
- trees within a conservation area;
- trees that are of amenity, landscape and/or heritage value due to their size, location and/or species.

Where alterations/extensions are proposed to residential properties, details (height, species and trunk diameter) of all important trees with 12 metres of any new buildings, new underground services or new accesses should be provided.

For all other new build developments, all important trees within the site or within 12 metres of the site boundary should normally be included.

Where a change of use only is proposed, or where proposed extensions/alterations would not alter the footprint of existing building, service routes or access arrangements, a survey will not usually be required.

For the purpose of tree surveys, any trees with a stem diameter of less than 75mm, measured at 1.5 metres above ground level, can be disregarded.

Landscaping Details

Information about landscaping proposals is normally required after permission has been granted by planning condition. However, in some cases, it is helpful if information about landscaping and planting proposals is provided with planning applications. This will most often be the case where:

- large scale development is proposed;
- development is proposed in prominent locations in the open countryside; or
- development is proposed that will form a new edge to a settlement.

Landscaping details may include: detailed planting proposals, plans showing indicatively the areas available for landscaping, or a more general landscape strategy which sets a framework for the development of future detailed proposals. The nature of information required will depend on the particular circumstances of individual proposals, but will generally take the form of landscape strategies and indicative proposals, rather than fully worked up planting proposals.

Contaminated Land – Vulnerability Questionnaire

Irrespective of the past use of a site, applications that propose a vulnerable end-use should be supported by a completed Vulnerability Questionnaire. Vulnerable end-uses include: any residential development (excluding extensions to existing dwellings), nursing home, garden, school, nursery/crèche, play area, allotments, hospital and any mixed use development that includes a sensitive end use described above. Information obtained from the Vulnerability Questionnaire is used to assess whether a more formal desk study/site investigation of land contamination is necessary. A site walkover is required in order to complete the Vulnerability Questionnaire. A formal desk study and site walkover is required for all application sites in the vicinity of landfill and for sites where contamination is known or suspected. Applications proposing 11 dwellings or more, irrespective of whether the site has a potentially contaminative past use, trigger the need for a formal desk study and site walkover.

The contaminated land web page on Council's website includes an advice note that provides more detailed guidance on the type and level of information required.

Depending on the findings of a formal desk study, further more detailed site investigations may be required.

Flood Risk Assessments

[New applications should include a site plan showing the locations of watercourses/ditches.](#)

Planning applications should include a Flood Risk Assessment in the

following cases:

- | - all proposals for development on sites of more than 1 hectare;

- all proposals for development (including minor development and change of use) within Flood Zone 2 (Medium Probability of Flooding) and Flood Zone 3 (High Probability of Flooding/Functional Flood Plain);

- All proposals in an area within flood zone 1 which has critical drainage problems; and

- Where proposed development or change of use to a more vulnerable class may be subject to other sources of flooding.

Flood Risk Assessments should identify and assess the risks of flooding to and from the development, and demonstrate how these flood risks will be managed. In accordance with the requirements of the National Planning Policy Framework, a flood risk assessment must demonstrate that the development will be safe for its lifetime taking account of the vulnerability of its users, without increasing flood risk elsewhere, and, where possible, reducing flood risk overall.

Sustainable Drainage Systems (SuDS)

Planning applications should include a drainage strategy, demonstrating how, through the application of the drainage hierarchy, surface water will be managed within the site and eventually discharged without resulting in increased risk of surface water flooding either on or off site. There is an expectation that arrangements for the maintenance of sustainable drainage systems form part of new major development proposals. Applications for major development* must be supported by sufficient information, both in respect to the design of systems and their future maintenance, to enable the Lead Flood Authority and Council to discharge their duties in respect to surface water management.

A completed checklist is to support planning applications for major development in order to demonstrate that the necessary information has been supplied to assess the suitability of the proposed sustainable drainage system. Failure to provide any of the information requested in the checklist may result in the Lead Local Flood Authority making a recommendation for refusal of the planning application on grounds of insufficient information.

*Major development applications:

10 plus dwellings/.5Ha and over

Office/light industrial - 1000 plus sqm / 1ha or more site area

General Industrial – 1000 plus sqm / 1ha or more site area

Retail—1000 plus sqm / 1ha or more site area

Gypsy/traveller site—10+ pitches

Additional SuDS information, including the checklists, can be found on Council's website:

<http://www.breckland.gov.uk/article/2939/Sustainable-Drainage-Systems-SuDS->
www.breckland.gov.uk/content/sustainable-drainage-systems-suds

Air Quality Information

Planning applications should include an Air Quality Report where development is:

- likely to have a significant impact on local air quality;
- proposed inside or close to an Air Quality Management Area (AQMA); ~~and~~
- likely to result in the designation of a new AQMA; and
— pig and poultry applications on designated sites.

Noise Impact Information

Planning applications should include a Noise Assessment where the development proposed:

has potential to cause significant problems of disturbance to surrounding

properties - for instance, where a noisy commercial use is proposed close to housing; or

Formatted: Indent: Left: 0.84 cm,
Hanging: 0.63 cm

is itself likely to be affected significantly by local noise sources - for example, where new housing is proposed close to a busy major road or noisy commercial activities.

Noise Assessments should evaluate the likely impact of noise from or on the development, and, where appropriate, outline proposed mitigation measures. Assessments should be prepared by suitably qualified persons, and take into account all relevant technical guidance.

Lighting Assessments

Planning applications for development that include commercial scale floodlighting should include a Lighting Report. This Report should include details of the type and design of the lights proposed, the hours when they will operate, and proposed illumination levels. The report should also explain how the proposed lighting scheme has been designed to minimise light pollution.

Archaeology

Where a site proposed for development is known, or suspected, to include archaeological remains of some significance, applications should include some form of archaeological assessment. This assessment may involve a desk-based study of existing information and records, or a field evaluation involving a ground survey and small scale trial trenching. Assessments of this sort are intended to define the character of archaeological remains and identify options for preserving them. Applicants are encouraged to discuss with Norfolk Historic Environment Service the extent of information likely to be required, prior to the submission of applications.

Geodiversity Information

The Council has a duty to consider the conservation of geodiversity when determining planning applications. Where development proposed is likely to affect geodiversity interests additional supporting information will be required.

A Geodiversity Report will generally be required where the proposed development would affect:

- A designated site;
- Other geological or geomorphological conservation features .

This information will be required unless it is clear that designated sites or geological features will not be affected by the proposed .development. Evidence of this will be required in the form of a letter or short report from a suitably qualified person.

Listed Buildings

[The NPPF, Policy 12: Conserving and Enhancing the Historic Environment Paragraph 128 of the NPPF](#) sets out information that an applicant should submit to Council where proposals will impact the historic environment. Applications to alter listed buildings need to be supported by detailed plans and specifications to allow effects on the special interest of the buildings to be assessed properly. The scope and degree of information required will depend on the particular circumstances of the individual proposals. However, other than for the most minor proposals, the following further supporting information is likely to be needed:

- [Heritage Statement \(details are set out below\):](#)
- A full schedule of works;
- A method statement outlining repair or conversion techniques proposed;

Formatted: Bulleted + Level: 1 +
Aligned at: 0.84 cm + Indent at: 1.48
cm

- Door and window joinery details, including sections at a scale of 1:1;
- A structural survey (where significant works of conversion, rebuilding or demolition are proposed);
- Photographs of important features.

Applicants are encouraged to discuss with the Council’s Historic Buildings Advisor the extent of information likely to be required, prior to the submission of applications. Applicants should also pay particular attention to those requirements set out at [Policy 12 of the NPPF](#) ~~paragraph 128 of the NPPF~~.

Heritage Statement

A heritage statement should set out the details of the history and the development of the heritage asset, using photographic, map, archival and fabric evidence. It should be accompanied by a photographic record, showing the site context and spaces and features which may be affected by the proposal, preferably cross referenced to survey drawings. It should also include an assessment of the archaeological, architectural, historical or other significance of the asset. It will also be necessary to include an assessment of the impact of the proposed works on the significance of the asset, and a statement of justification for those works, together with any mitigation measures proposed.

The justification element of the statement should cover the design and the extent of the proposed extensions, the remodelling, alteration, or loss of historic fabric and the remedial structural interventions necessitated by the condition of the fabric.

Transport Assessments

Where a proposed development is likely to have significant transport implications, planning applications should be accompanied by a Transport Assessment. Transport

Assessments will be required generally for larger developments, such as housing schemes of more than 50 dwellings, and other developments with more than 100 car parking spaces. The coverage and detail of the Transport Assessment should reflect the scale of the development and the extent of the transport implications of the proposal. Further advice on individual proposals can also be obtained from Norfolk County Council (NCC) as the local highway authority. [Local threshold levels for Norfolk are set within the NCC document “Safe Sustainable Development”.](#)

In cases where the development may also impact upon the Trunk Road network (A11/A47) discussions should take place with Highways England.

Parking Provision Assessment

A parking provision assessment is required where the development proposes an increase or loss of parking provision and/or the development would affect the parking requirements needed, i.e. by adding or reducing facilities, floor space, or staff/visitors. Where a Transport Assessment is required, the information may be included within that document.

Travel Plans

For all proposals that require a Transport Assessment (see above), a Travel Plan (at least in draft form) should also be submitted in support of a planning application. A Travel Plan should outline the way in which the transport implications of the development are going to be managed in order to ensure the minimum environmental, social and economic impacts.

Formatted: Default, Right: 0 cm, Line spacing: single

Formatted: Font: 12 pt

Formatted: Underline

Formatted: Default, Right: 0 cm, Line spacing: single

The Travel Plan should have a strategy for its implementation that is appropriate for the development proposal under consideration.

Utilities Statement

It can be helpful for planning applications to include a Utilities Statement where:

- large scale major development is proposed; or
- there are known deficiencies in existing infrastructure systems that may be exacerbated by proposed development.

Utilities Statements should explain how a proposed development will be linked to existing utility infrastructure systems, and demonstrate that:

the existing services and infrastructure have sufficient capacity to accommodate the supply/service demands which would arise from the completed development; and

the provision of services on site would give rise to any environmental impacts, for example, excavations in the vicinity of trees or archaeological remains.

Septic Tanks

Where a septic tank is proposed, planning applications should include information to show that other forms of drainage are impracticable and that ground conditions will enable a septic to function properly.

Reference should be made to the national planning guidance set out in "Planning Practice Guidance" to the NPPF.

Space Standards

It can be helpful for planning applications to include a statement showing how new residential development complies with the Technical housing standards – nationally described space standard (19 May 2016) or any subsequent adopted document.

Telecommunications Development

Applications for mast and antenna developments by mobile phone operators should be accompanied by a range of supplementary information, including the area of search, details of any consultations undertaken, details of the proposed structure, and technical justification and information about the proposal. Applications should also be accompanied by a signed declaration that the equipment and installation has been designed to be in full compliance with the requirements of the radio frequency public exposure guidelines of the International Commission on Non-Ionizing Radiation Protection.

Agricultural Dwelling Justification

Planning applications for agricultural dwellings (whether permanent or temporary) should include information demonstrating why the dwelling is required in connection with a rural enterprise. Applications should demonstrate that the operation of the rural enterprise requires an on-site residential presence and is a sustainable business. Information supporting an agricultural dwelling application should include the following:

- Details of the existing rural enterprise/holding, including its scale, nature and location of existing or approved plant, buildings or dwellings, and crop or livestock production (as applicable);
- Location of the rural enterprise/holding and its relationship to the proposed site of the agricultural dwelling;
- Financial accounts demonstrating the enterprise will provide sufficient income to support the applicant.

Conversions of Agricultural Buildings

The following information will be required in connection with proposals for the conversion of agricultural buildings:

A structural survey - this information is needed in order to determine whether the building concerned is suitable for conversion without major alteration or rebuilding;

A full schedule of works (both internal and external) for conversions to traditional agricultural buildings that pre-date 1900;

A Protected Species Survey to determine whether bats, owls or other protected species are present;

Where residential conversion is proposed, evidence should be provided to demonstrate that a commercial use is not viable in terms of sales particulars demonstrating the site has been suitably marketed (at an appropriate value, in appropriate publications and for a reasonable period of time (at least one year) as well as details as any offers received) and/or a viability assessment (this information can be treated confidentially if stated by the applicant).

Where residential conversion of a barn is proposed, Council's Barn/Agricultural (Contamination) Questionnaire must be completed.

Extraction Equipment Information

Applications for restaurants/cafes/hot food takeaways/public houses should include details of any ventilation and extraction equipment proposed, including its location, design, odour abatement and noise characteristics. Such information will also be required for significant retail,

Formatted: Font: 10 pt

business, industrial, leisure or other similar developments, where substantial ventilation or extraction equipment is proposed to be installed.

Minerals and Waste

Mineral Safeguarding Areas are defined in Policy CS16 of the adopted 'Norfolk Core Strategy and Minerals and Waste Development Management Policies DPD' (the 'Minerals and Waste Core Strategy') and the adopted Policies Map in accordance with national policy and guidance. The Minerals and Waste Core Strategy and accompanying Policies Map form part of the Development Plan for Norfolk.

Proposed non-mineral development within Mineral Safeguarding Areas are required to carry out site investigations and assessment of the mineral resource to determine whether it is a potentially viable resource. If the mineral resource is potentially viable, national and local policy states that it should not be needlessly sterilised, and this would require mitigation measures such as prior extraction and/or reuse on site. It is considered that the validation list should be amended to include the requirement for mineral resource safeguarding assessments for non-mineral planning applications within Mineral Safeguarding Areas.

Health Impact Assessment

For significant major developments of over 100 dwellings, a statement that identifies the impacts of the development proposal on health (including obesity, mental health and wellbeing), identifies opportunities to reduce health inequalities as a result of the development including in their design, construction and management and details necessary mitigation (inherent within the scheme) as well as through the use of conditions and/or obligations.

Where a proposal is accompanied by an Environmental Statement, the details may be provided within the relevant sections of that document.
